Turning data into information

# The pitfalls of loving data

No 1 – wanting to do too much

Which leads to ...

Lots and lots of graphs that nobody reads

And the other is...

Over analysis

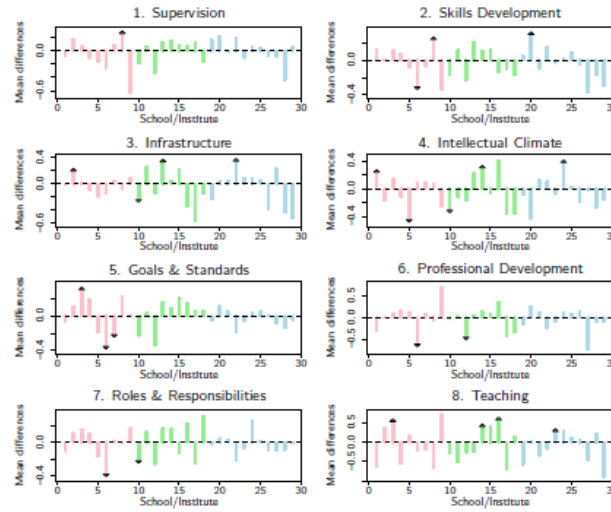

Figure 3: Mean differences from Faculty averages.  $\Delta$  indicates that the School/Institute mean is significantly *higher* than the Faculty mean;  $\nabla$  indicates that the School/Institute mean is significantly *lower* than the Faculty mean. Colours indicate Schools/Institutes belonging to **FMS**, **HaSS** and **SAgE**.

Colours indicate Schools/Institutes belonging to **FMS**, **HaSS** and **SAgE**.

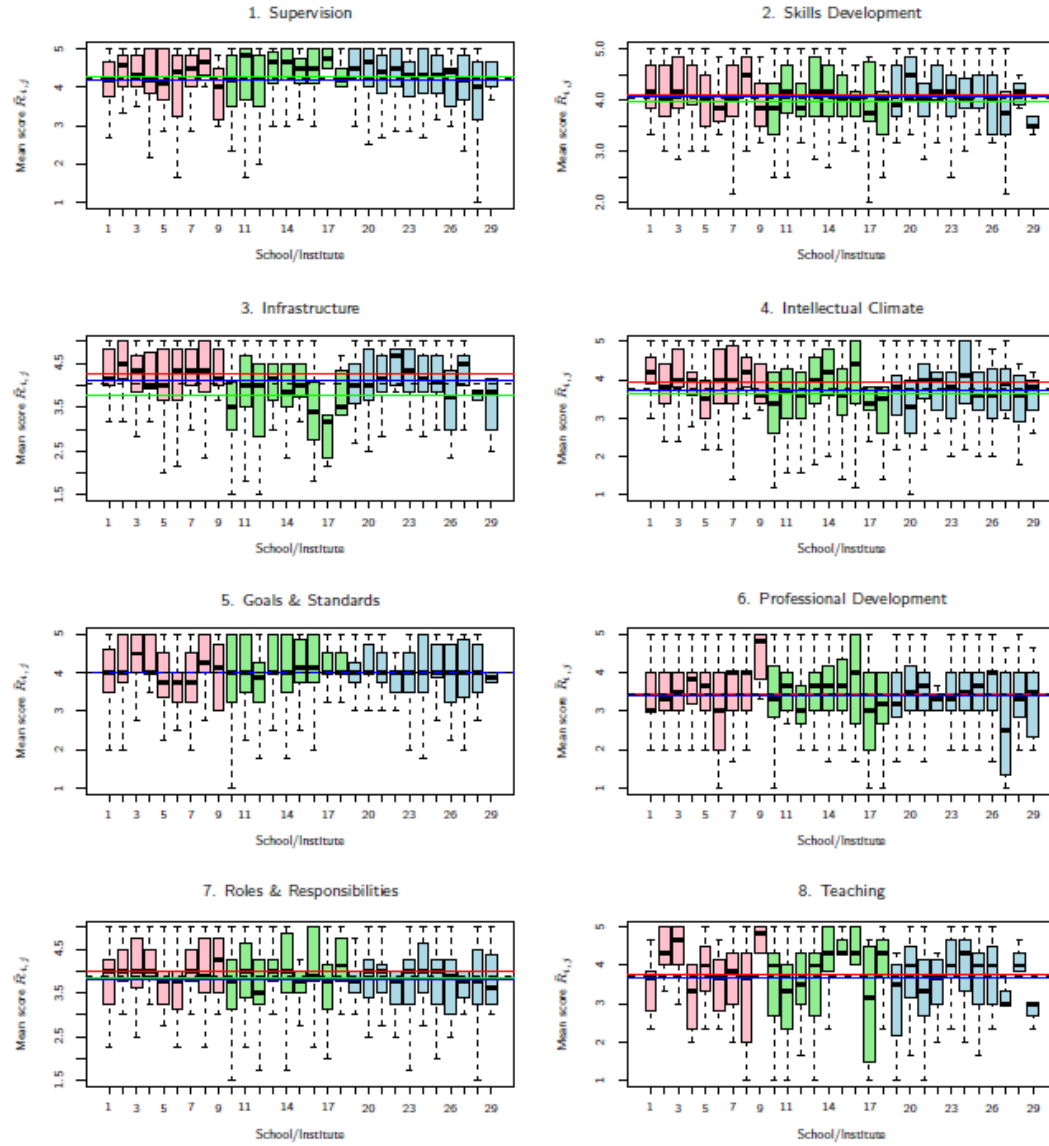

Figure 1: Boxplots of mean scores  $\bar{R}_{i,j}$  for some parts of the PRES: Colours indicate Schools/Institutes belonging to FMS, HaSS and SAgE. A list of Schools/Institutes, given here by numbers 1–29, is given on page 3. The horizontal solid lines indicate faculty averages (colour-coded to match the boxplots), and the horizontal broken lines show University averages.

## Average Student Contact Hours, Stage 1 Undergraduate

More one off questions - combining different data  
- teaching class sizes

The simple thing is to look at students numbers per module.

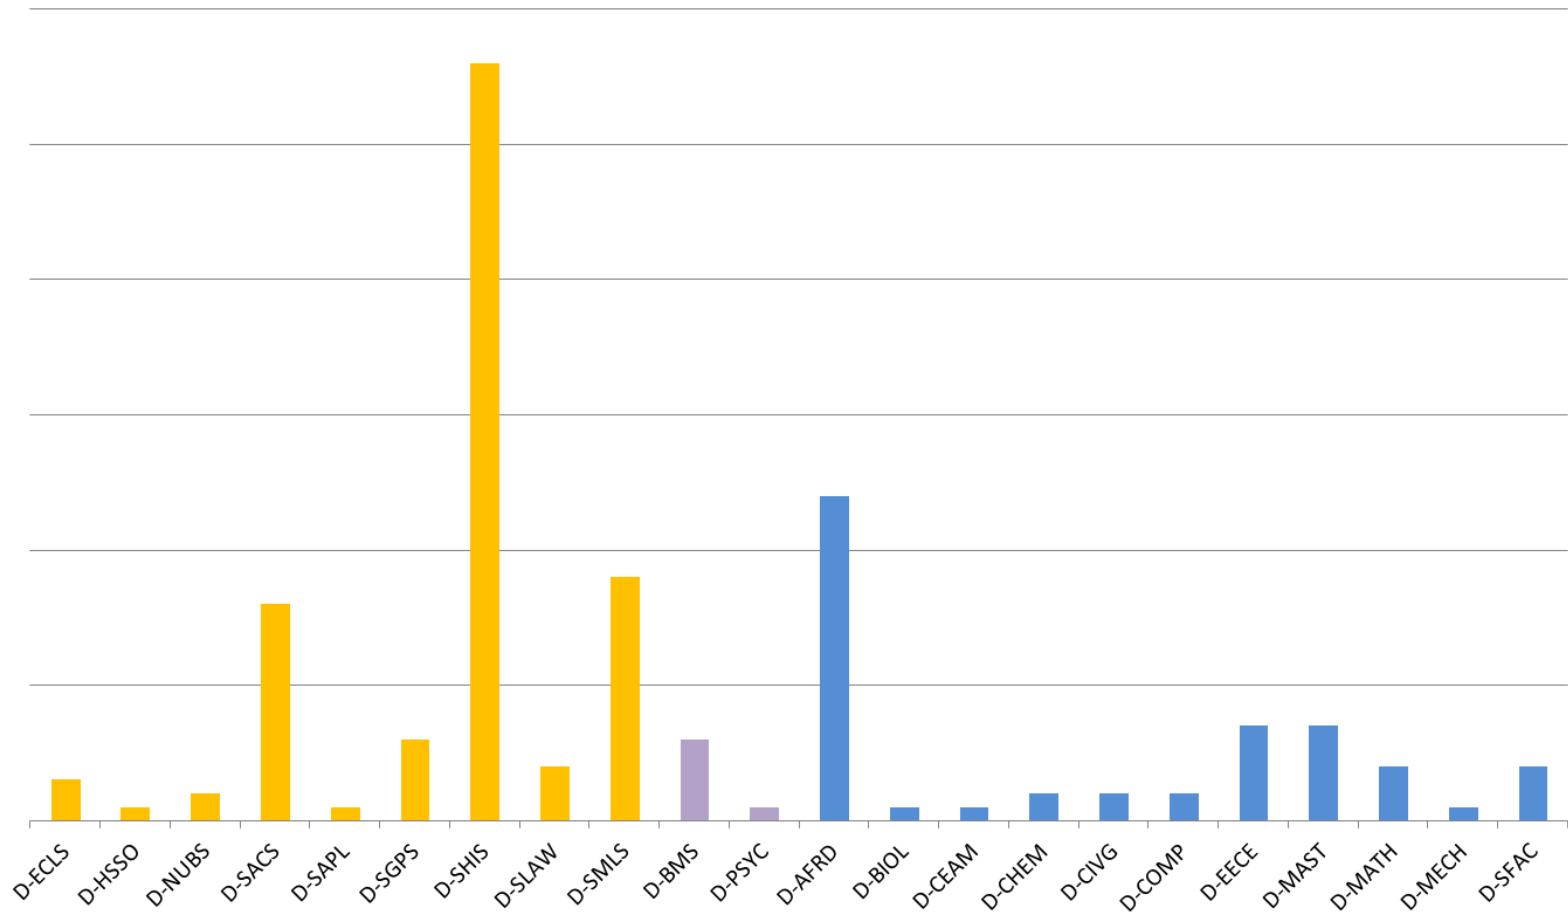

“But we teach those modules with others, so your data’s wrong. It’s not showing the true picture.”

The module booking report, showing student numbers per module.

Combined with Syllabus+, to account for co-taught modules.

## Number of undergraduate modules with less than 15 students on all co-taught modules
